

In the claims

1. (Currently Amended) A support device comprising:
a shaft having a first end and a second end;
threads disposed at the first end of the shaft for use in securing the device to a pole;
~~at least one rigid~~ a plurality of support members disposed on the second end of the shaft for supporting an object from the device, the ~~at least one~~ plurality of rigid support members being integral with the shaft; and
a pusher integral to the second end of the shaft and adapted to drive the shaft into the pole, wherein the pusher is tapered and the pusher including:
a driving end adapted to receive force applied from a piston of a powder driven tool, and
an extension portion extending from the driving end and, wherein the extension portion is integral with the shaft;
a stop member positioned distally of the threads on the shaft;
2. (Previously Presented) The support device of claim 1, wherein the shaft comprises stainless steel.
3. (Previously Presented) The support device of claim 1, wherein the shaft comprises titanium.
4. (Previously Presented) The support device of claim 1, wherein the shaft has a concave surface.
5. (Cancelled)
6. (Previously Presented) The support device of claim 1, wherein the rigid support member comprises a curved portion.

7. (Previously Presented) The support device of claim 1, wherein the rigid support member comprises a ring portion.
8. (Cancelled)
9. (Previously Presented) The support device of claim 1, wherein a first rigid support member comprises a curved portion and a second rigid support member comprises a ring portion.
10. (Previously Presented) The support device of claim 1, wherein the pusher comprises a concave surface.
11. (Previously Presented) The support device of claim 1, wherein the pusher comprises a planar surface.
12. (Cancelled)
13. (Previously Presented) The support device of claim 1, wherein the pusher comprises a hook portion.
14. (Previously Presented) The support device of claim 1, wherein the pusher is thinner than the shaft.
15. (Previously Presented) The support device of claim 1, wherein the pusher comprises a notch.
- 16.-17. (Cancelled)

18. (Currently Amended) An assembly comprising:
a powder driven tool including a powder cartridge, a barrel, a piston within the barrel, and a trigger for actuating ~~[[a]]~~ the piston within ~~[[a]]~~ the barrel; and
a support device including a pusher on a first end where the pusher is located at least partially within the barrel and is adapted to receive force applied from the piston for driving a second end of the support device into a pole,
wherein the support device comprises at least one of a curved portion and a ring portion.
19. (Currently Amended) The assembly of claim 18, wherein the powder driven tool further ~~comprising~~ comprises a muzzle extender connected to the barrel ~~of the powder driven tool~~ for cradling the support device.
20. (Cancelled)
